National Aeronautics and
Space Administration

(Photo taken in 1964) Nucleus of 1960 Flight Operations Division—The group above was assembled at the Houston Petroleum Center in Houston just prior to the final relocation of Manned Space Craft employees to the Center. Members of the group were all formerly part of the Mission Analysis Branch of the Flight Operations Division in 1960. These people had an active part in the mission planning and analysis studies performed for the Mercury project and continued this work as part of the Mission Planning and Analysis Division, Flight Operations Directorate, for the Gemini and Apollo programs. The group above along with the rest of their division, which at the time numbered nearly 200, moved into offices in Bldg. 30. This was the last of about ten moves by some members of the group since they first began working for NACA/NASA in the Unitary Wind Tunnel Building at Langley Research Center, Hampton, Virginia, in July 1958. The women are (l to r) Doris Folkes, Cathy Osgood, Shirley Hunt, and Mary Shep Burton. The men are (l to r) Dick Koos, Paul Brumberg, John O’Loughlin, Emil Schiesser, Jim Dalby, Morris Jenkins, Carl Huss, John Mayer, Bill Tindall, Hal Beck, Charlie Allen, Ted Skopinski, Jack Hartung, Glynn Lunney, John Shoosmith, Bill Reini, Lyn Dunseith, Jerry Engel, Harold Miller, Clay Hicks. Missing at the time the picture was taken were Nancy Carter and Marty Jenness. At the time of the photo, Dick Koos, Harold Miller and Glynn Lunney were working in the Flight Control Division. Jack Hartung was in the Apollo office and John Shoosmith worked in the Computation and Analysis Division.
