Good morning Blue. Looks like another day per the timeline. That's the way we like 'em. We've added PFCs for PLT and MS1.

Current thermal models of the temperature for the power supply on PGSC (STS-4) show that the temperatures may be higher than predicted. Msg 166 provides a quick procedure to check the temperature. Please perform at your convenience.

We'll uplink some Super Bowl highlights via OCA near the end of your day.

The CM-2 team continues to be excited about our growing family of flameballs. Naming the flameballs has made this more personal and has made each flameball more special – Thanks to Dave for initiating the naming! We see you're doing a good job of using the Gray (Butler) tape in SPACEHAB. We wouldn't want those extra rolls to go to "waste"!

It's better late than never for the MEIDEX team, as Ilan has just reported that he may have captured what may be our first real dust of the mission! MEIDEX and Hitchhiker thank you from the bottom of their hearts for all your efforts. Even though they're running a little chillier than expected, SOLSE is optimistic about the great data you have acquired. Quicklook says that the data is great; the real analysis takes A LOT more data crunching. CVX has completed its third critical period, and SOLCON and LPT continue to operate nominally.

The following is a list of the total compliment of straws with locations:

<u>Location</u>	<u>Stowed with</u>	<u>Qty.</u>
MF14H	RED 4 menu items	1Kit
A/L Ceiling bag	RED 17menu items	1Kit
A/L Ceiling bag	BLUE 17 menu items	4 Kit
MF57A Center tray	Pantry Accessory Assy	6 Kit
MF57A STBD back tray	Pantry Soup Kit	1 Kit
MF57A STBD back tray	Pantry Re-entry Kit	1 Kit

There are no Failure/Impact/Workarounds for Blue FD12.
